

How to stand out in your
job search?

April 1, 2023

Abinaya Mahendiran

- AI/ML Consultant (Freelancer)
- (Ex) Manager, Data Science & Applied AI, NEXT Labs, Mphasis
- M.Tech IT, International Institute of Information and Technology Bangalore
 - Mentor at TeamEpic, Springboard, Topmate.io
- Volunteer at WTM, Data Conversations, GHCI, WAI, Women Who Code
- Technical blogger, Public Speaker
- Interests : Building NLP/NLU/MLOps systems, Open source, Applied Research

$$\begin{aligned} \text{1\% better every day} & \quad 1.01^{365} = 37.78 \\ \text{1\% worse every day} & \quad 0.99^{365} = 0.03 \end{aligned}$$

1. You lack communication skills

2. You lack critical thinking and creativity

3. You lack adaptability

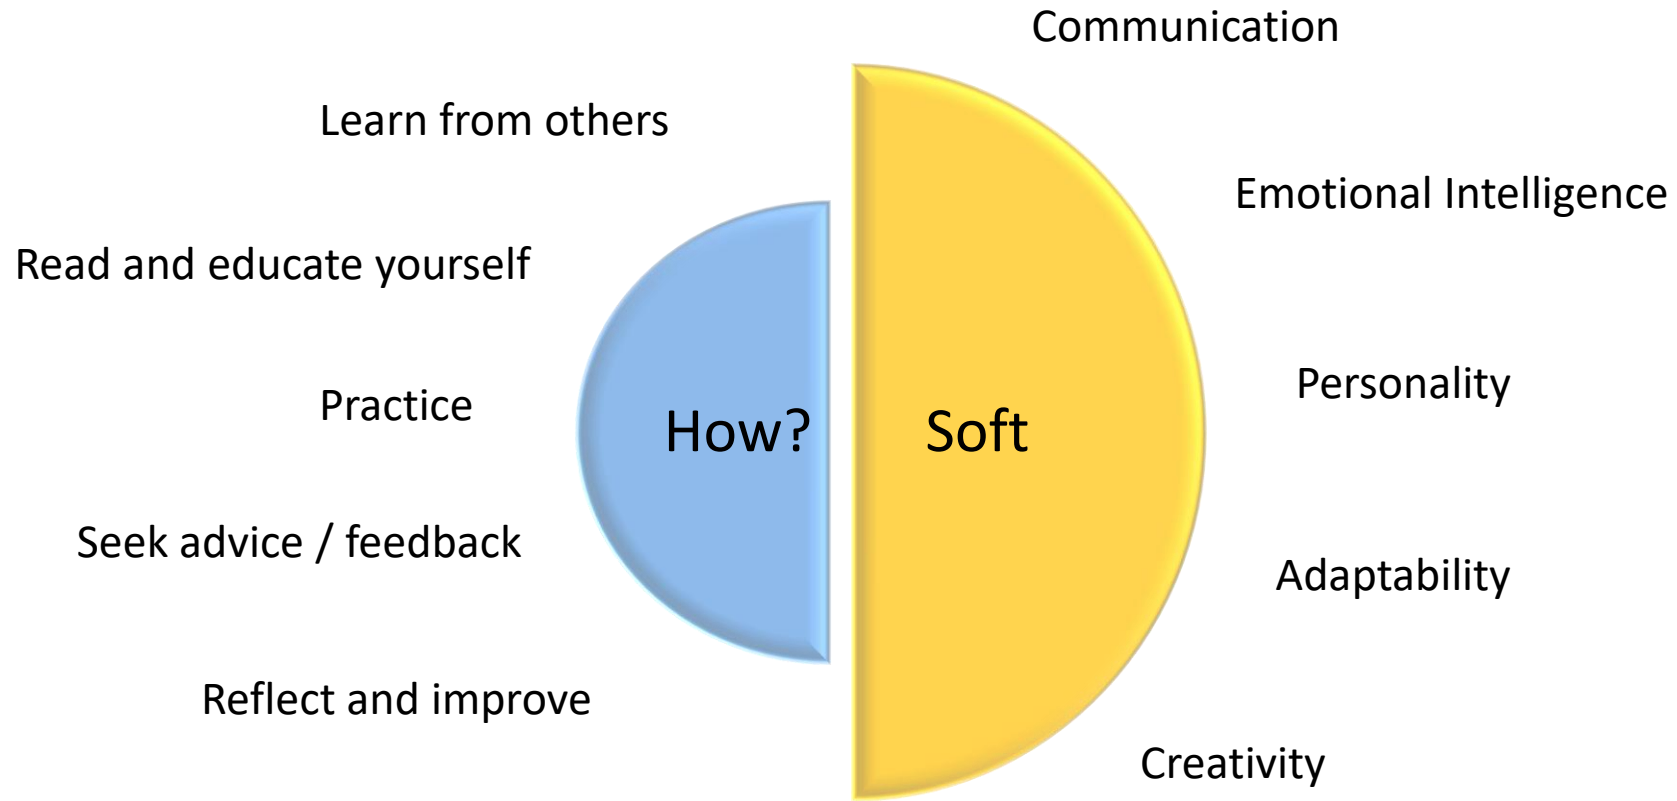

4. You lack empathy and interpersonal skills

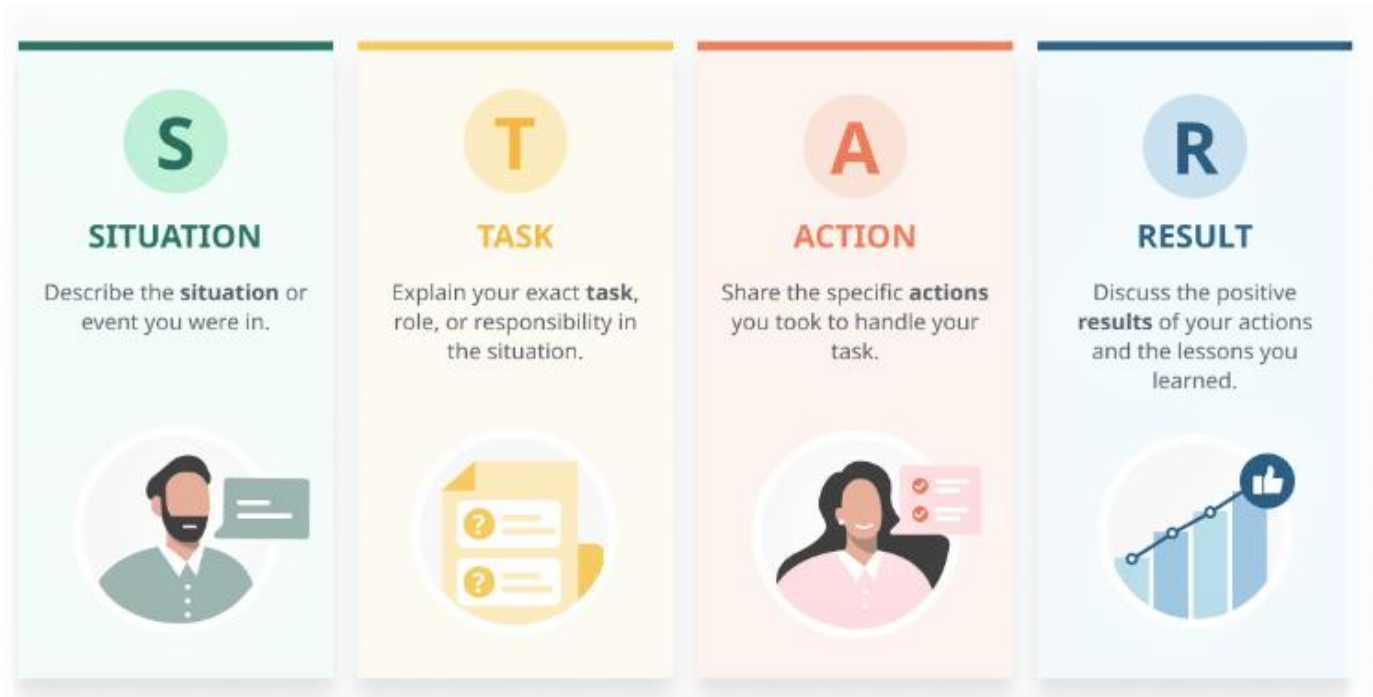

Develop your skills

Build a strong resume

- Tailor your resume to the job
- Keep it concise
- Use strong action verbs
- Highlight your accomplishments
- Include relevant skills
- Use STAR method

Build a strong resume

- Use a professional format (1 page/2 page)
- Proofread for errors
- Include relevant education and experience
- Keep it up to date
- Include your GitHub

a. Introduction

- i. Your name
- ii. Email id
- iii. Phone number
- iv. *Place*
- v. Github profile/ personal website
- vi. LinkedIn profile

b. Objective or Statement of Purpose (SoP)

c. Work experience/Internship

- i. List your work experience in chronologically decreasing order. Recent job/internship should be first.
- ii. State the designation, company name and the duration of your work
- iii. Add projects worked on during internship/work
- iv. Add technologies used in project

d. Education

- i. List your education in chronologically decreasing order (college first, 12th followed by 10th).
- ii. State the degree, name of the college, duration of study, and the recent grade for college. For school, state the standard, school name, year of passing and percentage [remove this later once you start working].

e. Skills/Tools

- i. Programming language: Python, JAVA, C
- ii. OS: Ubuntu/Windows/iOS
- iii. Tools/frameworks: PyTorch, Tensorflow, Angular,
- iv. Areas of interest: Operating system, NLP

f. Publications/Patents/Certifications [optional]

- i. List publications/patents/certifications in chronologically decreasing order. Recent publication first.

g. Projects

- i. List projects in chronologically decreasing order. Recent project first.
- ii. Add project title, and duration of the project. If it's done during internship/work, add the company name as well as title.
- iii. Describe the project in one or two lines. What is it about and what is your part in the project? Keep it short and succinct. Write the description in active voice.
- iv. Add the tools/technology used in the project.
- v. Repeat the same for all the projects you want to list.
- vi. You should only add the projects that you're comfortable with.

h. Extra-curricular activities

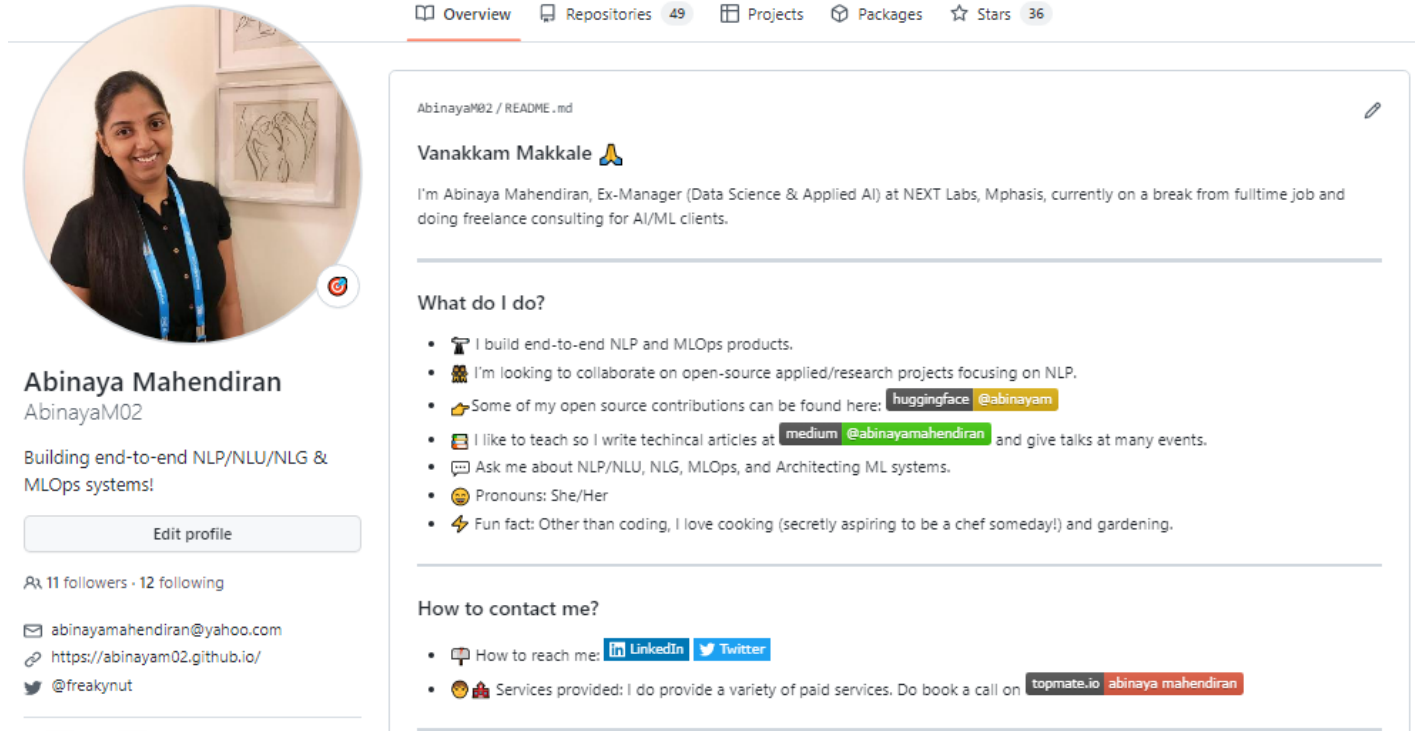

- i. Mention all the additional achievements (choose the ones that you really want to showcase)

Showcase your portfolio

- Organize your work to make it navigable
- Highlight your best work
- Use visuals
- Provide context
- Keep it up-to-date

Best options:

- Github (github.io & GitHub actions)
- Personal website

The screenshot displays a GitHub profile for Abinaya Mahendiran. The profile includes a circular profile picture of a woman with long dark hair, a bio stating 'Building end-to-end NLP/NLU/NLG & MLOps systems!', and a list of social media links including email, GitHub, and Twitter. The 'What do I do?' section lists her work on NLP and MLOps products, open-source contributions, and technical writing. The 'How to contact me?' section provides links to LinkedIn, Twitter, and a contact form.

AbinayaM02 / README.md

Vanakkam Makkale 🙏

I'm Abinaya Mahendiran, Ex-Manager (Data Science & Applied AI) at NEXT Labs, Mphasis, currently on a break from fulltime job and doing freelance consulting for AI/ML clients.

What do I do?

- I build end-to-end NLP and MLOps products.
- I'm looking to collaborate on open-source applied/research projects focusing on NLP.
- Some of my open source contributions can be found here: [huggingface](#) [@abinayam](#)
- I like to teach so I write technical articles at [medium](#) [@abinayamahendiran](#) and give talks at many events.
- Ask me about NLP/NLU, NLG, MLOps, and Architecting ML systems.
- Pronouns: She/Her
- Fun fact: Other than coding, I love cooking (secretly aspiring to be a chef someday!) and gardening.

How to contact me?

- How to reach me: [LinkedIn](#) [Twitter](#)
- Services provided: I do provide a variety of paid services. Do book a call on [topmate.io](#) [abinaya mahendiran](#)

Abinaya Mahendiran

Hi All, Welcome to my personal homepage!

I'm a seasoned engineer with right blend of software engineering and machine learning skills. Having worked in the industry for more than nine years, I'm currently on a break from my full time job and utilizing my time to do open source work, mentoring professionals and students and paid part-time consultation.

I'm a former Manager Data science based out of India with 10 years of experience in both software engineering and data science. My areas of expertise include NLP/NLU/NLG, Deep Learning, Machine Learning, Explainability and MLOps. I have successfully built and delivered end-to-end client projects and managed and mentored diverse distributed teams.

1. GEMv2: Multilingual NLG Benchmarking in a Single Line of Code

Arxiv - Jun 22, 2022

Evaluation in machine learning is usually informed by past choices, for example which datasets or metrics to use. This standardization enables the comparison on equal footing using leaderboards, but the evaluation choices become sub-optimal as better alternatives arise. This problem is especially pertinent in natural language generation which requires ever-improving suites of datasets, metrics, and human evaluation to make definitive claims. To make following best model evaluation practices easier, we introduce GEMv2. The new version of the Generation, Evaluation, and Metrics Benchmark introduces a modular infrastructure for dataset, model, and metric developers to benefit from each others work. GEMv2 supports 40 documented datasets in 51 languages. Models for all datasets can be evaluated online and our interactive data card creation and rendering tools make it easier to add new datasets to the living benchmark.

2. NL-Augmenter: A Framework for Task-Sensitive Natural Language Augmentation

Arxiv - Dec 6, 2021

Data augmentation is an important component in the robustness evaluation of models in natural language processing (NLP) and in enhancing the diversity of the data they are trained on. In this paper, we present NL-Augmenter, a new participatory Python-based natural language augmentation framework which supports the creation of both transformations (modifications to the data) and filters (data splits according to specific features). We describe the framework and an initial set of 117 transformations and 23 filters for a variety of natural language tasks. We demonstrate the efficacy of NL-Augmenter by using several of its transformations to analyze the robustness of popular natural language models. The infrastructure, datacards and robustness analysis results are available publicly on the NL-Augmenter repository.

NL-Augmenter: A Framework for Task-Sensitive Natural Language Augmentation

Data augmentation is an important component in the robustness evaluation of models in natural language processing (NLP) and in enhancing the diversity of
